Education

University of Toronto
Honours Bachelor of Science in Computer Science

May 2025

Skills

Languages: Python, JavaScript, TypeScript, Java, C/C++, SQL, HTML, CSS

Technologies: GitHub, NodeJS, React, Flask, Docker, PostgreSQL, MongoDB, Azure, Power BI, Bootstrap

Experience

Software Engineering Intern
Advanced Micro Devices - AMD

Markham, Ontario
Apr 2023 – Sept 2024

- Led the development of an internal **Python** library to collect weekly **GitHub** metrics across 55+ ROCm repositories using **REST** and **GraphQL** APIs. Built **Power BI** dashboards to deliver critical insights to the Corporate VP of Software Development (ROCm).
- Designed and implemented an automated **CI/CD** pipeline for ROCm repositories using **Azure** pipelines and **Docker**, resolved and debugged complex **C++** build errors, and streamlined build and test processes across all 55+ ROCm repositories.
- Designed a **PostgreSQL** database to store **Azure** pipeline metrics collected via **REST** API, and built **Power BI** dashboards that helped managers reduce cloud infrastructure costs.
- Developed a customer facing **GitHub** issue template for the ROCm GitHub organization, simplifying issue reporting for end users across 55+ repositories.
- Developed a **GitHub** Action using **REST** and **GraphQL** APIs to process and analyze issues for ROCm 5.7, 6.0, 6.1, and 6.2 launches, enabling senior managers to efficiently triage issues by **5%**.
- Upgraded an internal **Python** CLI based role management system to a **Flask** based web application, enabling users to manage permissions and roles through a web interface. Cut onboarding time for new users by **50%**.
- Developed a **Python** module running as a background service on Windows systems to automate Adobe license check-in and check-out processes, reducing manual intervention during automated benchmarking of Adobe applications by **15%**.
- Implemented a critical bug fix in an internal **Python** library to enable long path support on Windows, resolving errors related to benchmark result storage.

Projects

ExamJam: React, TypeScript, NodeJS, Docker, Python, MongoDB

Jan - Apr 2023

- Built a web scraping pipeline in **Python** to extract and process thousands of exams from the UofT exam repository, converting raw data into optimized blobs for efficient storage and retrieval in **MongoDB**.
- Developed a **React** web interface with an upvote/downvote system, rich text editing, and comprehensive account management functionality.

Awards

OXFORD Properties Hackathon - First Prize Valued at \$3000

Sep 2019

- Designed a responsive web interface accessible via QR code to enable building tenants to provide feedback.
- Generated metrics using collected data to help optimize building operations and resource allocation.
- Presented to industry professionals and won first prize.
