Education

University of Toronto
Honours Bachelor of Science in Computer Science

May 2025

Skills

Languages: Python, C/C++, JavaScript, TypeScript, Java, SQL, HTML, CSS

Technologies: GitHub, Azure, NodeJS, Flask, Power BI, Bootstrap, React, Docker, PostgreSQL, MongoDB

Experience

Software Engineering Intern
Advanced Micro Devices - AMD

Markham, Ontario
May 2023 – Sept 2024

- Enhanced an internal benchmarking **Python** module by adding a crucial setting to enable long path support for **Windows** systems, effectively resolving errors related to benchmark result storage.
- Created elegant frontend components with **JavaScript** leading to increased user satisfaction when scheduling and viewing benchmarking data.
- Developed a **Windows** Scheduled Task integrated with a **Python** module to **automate** and efficiently manage **Adobe** license check-in and check-out processes, significantly reducing the need for manual intervention when benchmarking **Adobe** applications.
- Developed a **Flask**-based **web application** enabling users to modify permissions and roles within an internal role management system.
- Developed a customer-facing **GitHub** issue template for the **ROCm GitHub** organization, streamlining issue reporting for end-users across **55+** repositories.
- Leveraged **GitHub REST** and **GraphQL** APIs to develop a **GitHub** Action for processing and analyzing issues related to the **ROCm 5.7, 6.0, 6.1, and 6.2** launches. This tool aided senior managers in issue triaging by populating an internal dashboard for efficient assignment and status reporting.
- Lead the development in creating a custom **Python** module to collect weekly metrics using the **GitHub REST API**, providing critical data to the **Corporate VP of Software Development (ROCm)** and laying the foundation for a robust **Power BI** reporting system.
- Collaborated on a team of four to create an **automated CI/CD** pipeline for **ROCm** repositories on **Azure**. Assisted in building and testing all **55+ ROCm** repositories from source locally and in **Docker** containers, and then replicated the build and test processes in **Azure Pipelines**.
- Designed a **SQL** schema to store pipeline and build data. Used **Python** to gather data from **Azure** via the **REST API**, populated a **PostgreSQL** database, and created **PowerBI** reports to aid managers in reducing **cloud computing** costs.

Projects

ExamJam: **TypeScript, NodeJS, Docker, Python, MongoDB**

Jan - Apr 2023

- Helped in the development of a **full-stack** web application designed to facilitate exam discussions for UofT students, leveraging modern technologies to deliver a seamless and scalable user experience.
- Engineered a **web scraping pipeline** in **Python** to extract and process **1000s** of exams from the UofT exam repository, transforming raw data into optimized blobs for efficient storage and retrieval in **MongoDB**.
- Designed and implemented interactive **frontend** components to enhance user engagement, including upvoting/downvoting systems, rich-text editing capabilities, and robust **account management** features, ensuring a dynamic and user-friendly interface.
